DETAILED ACTION

Response to Arguments

1. In view of the Appeal Brief filed on 1/23/04, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 14-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kempster et al. (US 5,873,809) in view of Steffens et al. (US 4,032,133).

Kempster et al. disclose a cushioning conversion machine comprising a frame; first and second rotating feed members 24 resiliently biased towards one another by

springs; see figure 10. The lower feed member is driven and the upper is positioned upon an idler shaft. The members form a pinch force on the material fed between.

Kempster et al. do not disclose exactly how the biased members are mounted, however Steffens et al. teach rotating feed members 34, 48 in pivotal carriers 94, 96 mounted on pivots biased by biasing members/springs 80. The releasable locking device 90 resiliently holds the feed members/rollers 34, 48 in position in a locked position. When released/unlocked, it allows for pivoting away in case of a paper jam etc. see column 4, lines 35-38.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to mount the rotating members as taught by Steffens in the invention of Kempster et al. in order to provide biasing towards one another.

Regarding claim 22, the Examiner takes OFFICIAL NOTICE that it further would have been obvious to one of ordinary skill in the art to substitute a leaf spring for the coil spring as they are recognized in the art as obvious variants.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
